Recent Projects

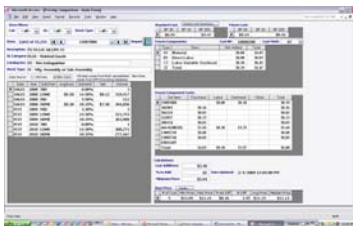

This screenshot shows a data-rich application window with a grid of columns and rows. The columns appear to represent different categories or time periods, and the rows contain numerical data. The interface includes a menu bar at the top and a toolbar with various icons.

➤ **Supply & Forecasting Planning Tool** – Provided executives with an easily modifiable and deployable system giving visibility to current supply & forecast data as well as create tabular & graphical reports, and production orders to vendors that could be uploaded to the J.D. Edwards system.

This screenshot displays a web-based form interface for processing price exceptions. It features several input fields, dropdown menus, and buttons for navigation and submission. The layout is organized into sections for data entry and processing.

➤ **Price Exception Request Processing Tool** – Provided field sales reps with a system for submitting special Price Exception Request to management while providing management with a system for processing, tracking and analyzing these requests and their material/financial impact on the company.

This screenshot shows a comparison tool interface with multiple data tables and charts. It appears to be used for analyzing cost and pricing data, with various filters and options for data manipulation.

➤ **Price Comparison Tool** – Provided management with data visibility and analysis of past, current, and planned materials cost and product pricing as well as data integrity analysis of critical profit margin factors in their primary data systems.

➤ **PLUS** many small applications, reports, & tools such as Marketing Surveys, Spray Pattern Analysis charts, etc. – all provided on request.

Advantages of Microsoft Office VBA Application Development

- **You're probably already using Microsoft Office Professional** – No need to buy a development platform. Just use what you already have!
- **Applications can be designed for “Use-As-You-Build”** - No need to wait weeks or months for a finished product. Immediate results!
- **Numerous design and deployment methods to chose from** - Build to suit whatever purpose – from a simple single-user file to full blown, complex, multiple-file applications deployable over servers and Wide Area Networks (YES! it *IS* possible!)
- **Applications can import/export Excel, Word, and text files** – Providing your workers with their data in familiar, commonly used formats. Minimal staff training requirements!
- **Can be integrated with email, slide show, and PDF software** - Automate data analysis, aggregation, presentation and distribution. All with the click of a button!
- **Can be secured** to prevent security breaches by the curious and “snoopers”.
- **Can be used on computers that do not have MS Office or Access installed** – Applications can be “packaged” and deployed to any machine! – No need to buy MS Office!
- ***And many more...!***
